Company Profile

# Support a lot of life.

IMEC Co., Ltd. (IMEC) was established in 1986 to maintain and manage medical equipment in hospitals and to provide consulting services for operating support consultations for medical institutions. To this day, we have collected many achievements.

Reliable expertise which is required for the smooth utilization of medical equipment that is developing remarkably, but when hospital staff are busy with their medical task, we will take a leap to improve hospital safety. Also, it contributes to reducing the burden of hospital management (operation). we strive and focus on that ideal purpose. In addition, we make various proposals such as how to handle and manage medical equipment in the hospitals, And every employee continues to work with all medical professionals sincerely and with responsible behavior.

furthermore, through our management philosophy, "we contribute the quality and services improvement of the medical care provided by all medical institutions for the health of the people, Through the maintenance, management and operation support of medical equipment", and based on that philosophy We will strive to develop our business. We look forward to your continued support and encouragement.

# In-hospital service

An environment where you can concentrate on medical tasks

IMEC is a hospital-based maintenance management service. We have a goal to improve the quality of the entire hospital by providing an environment where the medical staff can concentrate on their primary tasks.

# Stability

## Stable Equipment Management

We create and formulate a regular inspection plan for medical equipment in the Hospital and conduct reliable maintenance and inspection under the direction of the medical equipment safety manager to ensure the safety of the equipment. In addition, we established a back-up system with the manufacturer to ensure the operability of the equipment and be able to give a prompt response in the event of failure of the medical equipment.

# Repair

## In-hospital maintenance

The maintenance can be executed inside in the hospital by our staff who have attended the various machine training program and qualified to do the reparation, it will greatly reduce the reparation time (Downtime). In addition, by communicating with the manufacturer and reports to the hospital staff at any time when it is needed, you can concentrate on the medical and clinical tasks while understanding the equipment status.

# ME Center

## Medical Equipment Management Center

Creating equipment ledgers and Centrally manage highly versatile equipment. By managing and open sharing fixed asset ledgers and equipment ledgers we could easily know the location for the equipment in the Hospital. In addition, with lending and collecting equipment management planning by our staff, it is possible to maximize the benefit of the equipment management center without burdening the Hospital.

# Assets

## Asset Management Efficiency

By understanding asset value from the fixed assets, determining the disposal plan and renewal plan of the equipment will contribute to cost reduction with avoid wasting assets. We calculate how much budget for the equipment procurement and do the simulation of purchasing cost based on maintenance unit and interval durability. In addition, the centralization of equipment management will extend the durability of equipment utilization.

# Check

## In-hospital equipment survey

Our expert staff in medical equipment will conduct an examination survey on the current existing equipment in the hospital. We create the detail list of the equipment after the survey and comparing the list with fixed asset ledger or office ledger to identify the utilization of the equipment as unknown uses or infrequently uses for the contribution of the equipment identification and asset management of in-hospital equipment.

# Advise

## Medical equipment system introduction

We believe, it is necessary to build a system to manage medical equipment when managing the histories of the equipment maintenance, inspection, reparation, and etcetera, for the understanding of information in-hospital medical equipment information, performing maintenance, histories of inspections and reparations. We can introduce software that compatible with the needs of hospitals from each medical equipment management system company.

# Spot

## Maintenance, Inspection Service

There is a spot option for hospitals that want to request for regular maintenance, inspection but do not need to be in-hospital stationed. We support various periodic times of maintenance such as once in a year, once in a month, once in a week, and etc, to ensure the safety of the medical equipment by doing maintenance and inspection of the medical equipment in the hospital.

# Support

## Manufacturer Contract Service

We also provide support services for the manufacturer to support the maintenance services in such places with overwork or when a maintenance person is busy with reparation tasks, maintenance and lack of maintenance staff as well. We are always ready to support any cooperation request maintenance inspection and repair performed by the manufacturer

## Supporting all medical devices

# Other services

IMEC also offers a variety of other services. Our expert staff will support you to use medical equipment safely and effectively.
